ART UNIT	PAPER NUMBER
2625	

DATE MAILED: 07/31/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

PTO-90C (Rev. 10/03)

-- *The MAILING DATE of this communication appears on the cover sheet with the correspondence address* --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) OR THIRTY (30) DAYS,
WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
  after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any
  earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>10 May 2006</u>.

2a)☒ This action is **FINAL**.   2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is
closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) <u>1,4 and 6-23</u> is/are pending in the application.

    4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☒ Claim(s) <u>19 and 23</u> is/are allowed.

6)☒ Claim(s) <u>1,4,6-12,14-18 and 20-22</u> is/are rejected.

7)☒ Claim(s) <u>13</u> is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

    Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

    Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

    a)☐ All   b)☐ Some * c)☐ None of:

      1.☐ Certified copies of the priority documents have been received.

      2.☐ Certified copies of the priority documents have been received in Application No. _____.

      3.☐ Copies of the certified copies of the priority documents have been received in this National Stage
application from the International Bureau (PCT Rule 17.2(a)).

    * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☐ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
    Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
    Paper No(s)/Mail Date. _____ .

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

Response to Amendment

1.   Applicant's amendment was received on 5/10/06, and has been entered and made of

record. Currently, **claims 1, 4, and 6-23** are pending.

Response to Arguments

2.   Applicant's arguments filed 5/10/06 have been fully considered but they are not

persuasive.

3.   In response to applicant's arguments regarding the rejection of **claim 1**, which was cited

in the Office action dated 2/10/06 as being anticipated by Kawabuchi *et al.* (U.S. Patent Number

5,740,496), whereby applicant argues that Kawabuchi fails to teach of discarding image data

while maintaining associated image forming conditions, as applicant states that Kawabuchi is

seen as discarding a print job that is printing or print job that is being read, together with the

associated set mode data. As read in column 8, lines 62-67, Kawabuchi states that "When the

printing image data clear report is received, the read pointer is set to page 1 (S104), the print job

pointer is set to the next block (S105), and the set number is set to 1 (S106), in order to discard

image data of the job which is being printed." Further, as read in column 5, lines 24-29,

Kawabuchi states that "information in management table MT1 is erased when information

corresponding to one page is read out for the number of times corresponding to the desired

number of copies, from code memory 306." Continuing, Kawabuchi states in column 10, lines

5-16, that "after the clear key is 93 is pressed, when the job which is being read is to be

abandoned, the user touches selection key L1, and if the job which is being printed is to be

abandoned, the use[r] touches selection key L2." Thus, the images corresponding to the reading

job that are subsequently printed under the conditions set forth in the MTI, can be erased

independently from the printing data by pressing either the L1 key or the L2 key, as seen in Fig.

23 and read in the abstract. Because of this, Kawabuchi can be interpreted as discarding the

image data stored in the first memory when the command of discarding the image data is

generated by the command unit (whereby the image data corresponding to the reading job is

erased), while maintaining the associated image forming conditions stored in the second memory

(being the data in the set data in the MTI for the printing job).

4.   Therefore, the rejection of independent **claim 1**, as well as independent **claims 10 and**

16, and each of the corresponding dependent claims, which were cited in the Office action dated

2/10/06 under 35 U.S.C. 102(e) as being anticipated by Kawabuchi *et al.*, is maintained and

repeated in this Office action.

Claim Rejections - 35 USC § 102

5.   The text of those sections of Title 35, U.S. Code not included in this action can be found

in a prior Office action.

6.   **Claims 1, 4, 6-12, 14-18, and 20-22** are rejected under 35 U.S.C. 102(e) as being

anticipated by Kawabuchi *et al.* (U.S. Patent Number 5,740,496, cited in the Office action dated

2/10/06).

The applied reference has a common assignee with the instant application. Based upon

the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C.

102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37

CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the

inventor of this application and is thus not the invention "by another," or by an appropriate

showing under 37 CFR 1.131.

Regarding *claim 1*, Kawabuchi discloses an image forming apparatus (see abstract, and

Fig. 1) comprising a first memory for storing image data (memory unit 30, column 4, lines 37-

45), an image input unit for inputting the image data to the first memory (column 2, line 55-

column 3, line 49), a second memory for storing image forming conditions (being the

management table MTI stored in the RAM 126, column 4, line 37-column 5, line 7), the image

forming conditions being at least one of number of copies, and magnification (column 3, line 55-

column 4, line 4, and column 4, line 37-column 5, line 7), an image output unit for printing the

image stored in the first memory under the image forming conditions stored in the second

memory (column 6, lines 23-40), a command unit for generating a command of discarding the

image data being printed by the image output unit (see abstract, and column 8, line 49-column 9,

line 16), an image data discarding controller for discarding the image data stored in the first

memory when the command of discarding the image data is generated by the command unit (see

abstract, and column 8, line 49-column 9, line 16), while maintaining the associated image

forming conditions stored in the second memory (column 9, line 17-column 10, line 29), a job

stopping controller for stopping a print operation of a job being printed by the image output unit

(see abstract, and column 8, line 49-column 9, line 16), and an output control unit for causing the

output unit to output image data newly input from the image input unit after the discarding of

image data from the first memory under the maintained image forming conditions (column 3,

line 50-column 4, line 22, and column 9, line 17-column 10, line 29), wherein the command unit

generates a command of discarding the image data of the job stopped by the job stopping

controller (see abstract, and column 8, line 49-column 9, line 16), and wherein the image data

discarding controller discards the image data of the job stopped by the job stopping controller

and maintains the image forming conditions of the job (see abstract, and column 8, line 49-

column 9, line 16).

Regarding *claim 4*, Kawabuchi discloses the image forming apparatus discussed above in

claim 1, and further teaches of means for changing the maintained image forming conditions

(column 3, line 55-column 5, line 7).

Regarding *claim 6*, Kawabuchi discloses the image forming apparatus discussed above in

claim 1, and further teaches that the image input unit is an image reader for reading the image

from the original and acquiring the image data, wherein the image output unit and the image

reader operate independently (column 2, line 55-column 3, line 60).

Regarding *claim 7*, Kawabuchi discloses the image forming apparatus discussed above in

claim 6, and further teaches that when the image reader is reading another original, the command

unit generates a command of suspending the reading operation, and at the same time, it generates

a command of discarding the image data to be printed (see abstract, and Fig. 23, column 9, line

4-column 10, line 29).

Regarding *claim 8*, Kawabuchi discloses the image forming apparatus discussed above in

claim 6, and further teaches that when the image reader is reading another original, the command

unit generates a command of discarding the image data to be printed after the reading operation

for another original has been completed (column 3, line 50-column 4, line 67, and column 8, line 57-column 9, line 16).

Regarding *claim 9*, Kawabuchi discloses the image forming apparatus discussed above in claim 1, and further teaches that the image output unit is a printer for printing an image on a paper based on the image data (column 2, line 55-column 3, line 60).

Regarding *claim 10*, Kawabuchi discloses an image forming apparatus (see abstract, and Fig. 1) comprising an image for reading an original and acquiring image data of the original (column 2, line 55-column 3, line 49), an image memory for storing image data acquired by the image reader (memory unit 30, column 4, lines 37-45), a mode memory for storing image forming conditions selected for the acquired image data (being the management table MTI stored in the RAM 126, column 4, line 37-column 5, line 7), the image forming conditions being at least one of number of copies, and magnification (column 3, line 55-column 4, line 4, and column 4, line 37-column 5, line 7), a printer for printing an image on paper, based on the image data stored in the image memory, under the image forming conditions stored in the mode memory (column 6, lines 23-40), a command unit for generating a command of discarding the image data being printed by the printer (see abstract, and column 8, line 49-column 9, line 16), an image data discarding controller for discarding the image data stored in the image memory when the command of discarding the image data is generated by the command unit (see abstract, and column 8, line 49-column 9, line 16), while maintaining the associated image forming conditions stored in the mode memory (column 9, line 17-column 10, line 29), a print control unit for causing the printer to print another image data newly read by the image reader after the discarding of image data from the image memory under the maintained image forming

conditions in the mode memory (column 3, line 50-column 4, line 22, and column 9, line 17-

column 10, line 29), and a job stopping controller for stopping a print operation of a job being

printed by the printer, wherein the command unit generates a command of discarding the image

data of the job stopped by the job stopping controller (see abstract, and column 8, line 49-column

9, line 16), and wherein the image data discarding controller discards the image data of the job

stopped by the job stopping controller and maintains the image forming conditions of the job

(see abstract, and column 8, line 49-column 9, line 16).

Regarding *claim 11*, Kawabuchi disclose the image forming apparatus discussed above in

claim 10, and further teaches of a changing means for changing the maintained image forming

conditions (column 3, line 55-column 5, line 7).

Regarding *claim 12*, Kawabuchi disclose the image forming apparatus discussed above in

claim 10, and further teaches that the image reader and the printer operate independently

(column 2, line 55-column 3, line 60), and the image memory stores image data for a plurality of

jobs (column 4, lines 22-61).

Regarding *claim 14*, Kawabuchi discloses the image forming apparatus discussed above

in claim 12, and further teaches that when the image reader is reading another original, the

command unit generates a command of suspending the reading operation, and at the same time,

it generates a command of discarding the image data to be printed (see abstract, and Fig. 23,

column 9, line 4-column 10, line 29).

Regarding *claim 15*, Kawabuchi discloses the image forming apparatus discussed above

in claim 12, and further teaches that when the image reader is reading another original, the

command unit generates a command of discarding the image data to be printed after the reading

operation for another original has been completed (column 3, line 50-column 4, line 67, and

column 8, line 57-column 9, line 16).

Regarding *claim 16*, Kawabuchi discloses an image forming method (see abstract)

comprising storing image data in an image memory (memory unit 30, column 4, lines 37-45),

storing image forming conditions for the image data in a memory (being the management table

MTI stored in the RAM 126, column 4, line 37-column 5, line 7), the image forming conditions

being at least one of number of copies, and magnification (column 3, line 55-column 4, line 4,

and column 4, line 37-column 5, line 7), printing an image on a paper, based on the image data

stored in the image memory, under the image forming conditions stored in the memory (column

6, lines 23-40), generating a command of discarding the image data whose image is being printed

(see abstract, and column 8, line 49-column 9, line 16), stopping a print operation of the image

data being printed and erasing the image data from the image memory in response to the

command (see abstract, and column 8, line 49-column 9, line 16), while maintaining the

associated image forming conditions in the memory, acquiring new image data and storing the

new image data in the image memory (column 9, line 17-column 10, line 29), and printing a new

image on a paper, based on the new image data acquired after the discarding of image data from

the image memory, under the image forming conditions maintained in the mode memory

(column 3, line 50-column 4, line 22, and column 9, line 17-column 10, line 29).

Regarding *claim 17*, Kawabuchi discloses the image forming method discussed above in

claim 16, and further teaches of the step of changing the maintained image forming conditions

(column 3, line 55-column 4, line 4, and column 4, line 37-column 5, line 7).

Regarding *claim 18*, Kawabuchi discloses the image forming method discussed above in claim 16, and further teaches of the step of printing image data of another print job on a waiting list after the newly acquired image data has completely been printed (column 3, line 50-column 4, line 22, and column 9, line 17-column 10, line 29).

Regarding *claim 20*, Kawabuchi discloses the image forming apparatus discussed above in claim 1, and further teaches that the storing image forming conditions for the image data in a memory, the image forming conditions being at least one of number of copies, magnification and paper size (column 3, line 55-column 4, line 4, and column 4, line 37-column 5, line 7).

Regarding *claim 21*, Kawabuchi discloses the image forming apparatus discussed above in claim 10, and further teaches that the storing image forming conditions for the image data in a memory, the image forming conditions being at least one of number of copies, magnification and paper size (column 3, line 55-column 4, line 4, and column 4, line 37-column 5, line 7).

Regarding *claim 22*, Kawabuchi discloses the image forming method discussed above in claim 16, and further teaches that the storing image forming conditions for the image data in a memory, the image forming conditions being at least one of number of copies, magnification and paper size (column 3, line 55-column 4, line 4, and column 4, line 37-column 5, line 7).

Allowable Subject Matter

7.   **Claims 19 and 23** are allowed.

8.   **Claim 13** is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

9.   The following is a statement of reasons for the indication of allowable subject matter:

Regarding *claims 13 and 19*, in the examiner's opinion, it would not have been obvious

at the time of the invention to have the apparatus, as claimed, include the features of print control

unit that gives priority to a new job for printing under the maintained forming conditions over the

rest of the jobs on a waiting list.

Conclusion

10.   **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.

11.   Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Joe Pokrzywa whose telephone number is (571) 272-7410. The

examiner can normally be reached on Monday-Friday, 9:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Edward L. Coles can be reached on (571) 272-7402. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

                                                            Joseph R. Pokrzywa
                                                            Primary Examiner
                                                            Art Unit 2625
